Impossible Evolution. Refuting evolution doesn't require complicated equations or lab experiments—though those do the job, too. Just remember the two fundamental flaws we can use to show evolution to be not even scientifically viable.

Evidence of common descent of living organisms has been discovered by scientists researching in a variety of disciplines over many decades, demonstrating that all life on Earth comes from a single ancestor. This forms an important part of the evidence on which evolutionary theory rests, demonstrates that evolution does occur, and illustrates the processes that created Earth's biodiversity.

Biochemistry or biological chemistry, is the study of chemical processes within and relating to living organisms. A sub-discipline of both chemistry and biology, biochemistry may be divided into three fields: structural biology, enzymology and metabolism. Over the last decades of the 20th century, biochemistry has become successful at explaining living processes through these three disciplines.

There are so many scientific facts that scientists and even the general public take for granted in our modern society. However, many of these disciplines we now think are common sense had yet to be discussed in the 1800s when Charles Darwin and Alfred Russel Wallace were first putting together the Theory of Evolution through natural selection. While there was quite a bit of evidence that Darwin ...

The evidence that prokaryote-to-eukaryote HGT has facilitated the "recent" adaptation of protists to low oxygen environments is increasingly compelling (e.g., 74, 75, 76). But it is nevertheless also true that genes for anaerobic enzymes are cropping up in a much broader range of eukaryotes than expected, and not just in highly derived ...

The genome notably lacks the paleo-triplication observed in other eudicots, but reveals a lineage-specific duplication. The genome has evidence of slow evolution, with a 30% slower nucleotide mutation rate than observed in grape. Comparisons of the available sequenced genomes suggest a minimum gene set for vascular plants of 4,223 genes.
