This is because, as McMillan has it, newcomers to bioethics will subsume whatever issues are under consideration under one of the four principles, and then rule that the principle of autonomy should trump the other three principles.

[Theory and Bioethics \(Stanford Encyclopedia of Philosophy\)](#)

By applying the principles of ethics to the field of medicine, bioethics aims to investigate and study how health care decisions are made. It is a core component of ensuring that medical practices and procedures benefit society as a whole.

For example, though perhaps somewhat atypical, one might hold that there are even unconscious experiences, depending of course on how the term "experience" is defined (Carruthers 2000). More common is the belief that we can be aware of external objects in some unconscious sense, for example, during cases of subliminal perception.

The Ciba Foundation held the first international, interdisciplinary conference on ethical and legal issues in transplantation in March 1966. Many of the ethical issues discussed at that conference remain with us today. Organ procurement and transplantation have forced the medical community and society at large to ask such fundamental questions as when are we dead, how can death be declared so ...

Bioethics is a very exciting field of study, filled with issues concerning the most basic concerns of human beings and their close relatives. In some sense, the term bioethics is a bit ridiculous, as almost anything of ethical concern is biological, and certainly anything that is sentient is of ethical concern.
