The answer to this question is the need to overcome the activation energy of the reaction, which means that it requires energy at first to "jump start" the process. In your car, the distributor and battery provide this starting energy by creating an electrical "spark". Other sources of initial energy can come from the Sun, matches, friction, etc.

Conversely, if your answer has the correct units, you could still be wrong, but at least you are on the right track (and probably much of the time your answer is correct, too!) You can even do the calculation using just units and no numbers and see if the units cancel out in the right way to test if your method is good (this is called ...
