In these days of cars with power everything, the idea of converting a car to manual steering might seem quaint. But there are instances where manual steering is better than a power setup. For example, manual steering on a drag race car will save weight and free up a couple horsepower (no power steering pump to turn).

I have never heard of actually converting a manual box to a power, the power conversion comes from a externally attached assist ram, controlled by a reaction valve on the pitman arm or input shaft. Mustangs and early 60's ford trucks and tri five chevys as well as a bunch of other cars used that system.

Steering column: If you decide to 'upgrade' to the Saginaw box, then this info pertains you to. Since the Saginaw box is about two inches longer than a manual-steering (or Bendix) box, your existing column will not work as is. Obviously, the easiest course of action would be to simply find a donor truck of approximately the same year as your own and swap the steering column and box from it.

Generally speaking, power steering systems respond quicker to steering input than manual boxes. The manual box's lack of assist means that the gear ratio must be lower to allow the driver to turn the wheel. This lower ratio equates to more turns lock-to-lock, so steering response from a manual box is generally much lower.

May 4, 2005. #8. I converted mine to manual. All you have to change is the centerlink on a 65-66. The tie rods are different from a p/s to manual car, but p/s tie rod ends will work on a manual steering car. The p/s tie rods have a curve in them to clear the p/s valve body, but overall dimensions are the same as manual.
