A corrosion inhibitor is a chemical compound that, when added to a liquid or gas, decreases the corrosion rate of a material, typically a metal or an alloy, that comes into contact with the fluid. The effectiveness of a corrosion inhibitor depends on fluid composition, quantity of water, and flow regime. Corrosion inhibitors are common in industry, and also found in over-the-counter products ...

Transport and mobility in cities are important factors in the sustainability of the urbanized world. This article investigates one type of intra-urban transport: railway transport and the surrounding areas along the railway, i.e., whether railway corridors can be a factor in the sustainable development of cities in the 21st century. The aim of the article is to determine specific ...

Special Instructions for Lead and Copper Corrosion Samples. In order to properly test for lead and copper from plumbing corrosion, the water should be allowed to stand in the pipes for at least 12 hours and a "first-draw" sample should be collected. This sample should be taken first thing in the morning before any water has been used.
