There also exists a similar implementation called One-Cold Encoding, where all of the elements in a vector are 1, except for one, which has 0 as its value. For instance, [0, 0, 0, 1, 0] and [1, 0, 0, 0, 0] could be some examples of one-hot vectors. A similar technique to this one, also used to represent data, would be dummy variables in statistics.
