Overview. Fracture mechanics is a methodology that is used to predict and diagnose failure of a part with an existing crack or flaw. The stress intensity factor of a crack in a part magnifies the stress in the vicinity of the crack and may result in failure prior to that predicted using traditional stress analysis materials methods.. The traditional approach to the design and analysis of a part is to use ...

Materials fatigue performance is commonly characterized by an S-N curve, also known as a Wöhler curve. This is often plotted with the stress (S) against the cycles to failure (N) on a logarithmic scale. S-N curves are derived from tests on samples of the material to be checked (often called coupons or specimens) where a regular sinusoidal stress is applied by a testing machine ...
