Example #1: If 1500 Wh of energy is required daily for 3 days without sunshine (days of autonomy), and you have an inverter with 93% efficiency, you calculate  $1500 \text{ Wh} \times 3 \text{ days} / .93 / .80 \text{ DoD} = 6048 \text{ Wh}$  battery bank. If you have a 24V system, you could use two (2) of the 3865 Wh 24V SimpliPhi Smart-Tech batteries in parallel for 7730 Wh capacity.

As per my knowledge A C10 battery (150AH) minimum charging current is 15A ,, in the manual panel it is fluctuating from 10 to 13A and on the inverter screen it is from 14 to 18.6 in peak time. for a day average charging current is 8A. I am getting 3 units per day as per their manual and solar around 4 units.
