The golden ratio was studied peripherally over the next millennium. Abu Kamil (c. 850–930) employed it in his geometric calculations of pentagons and decagons; his writings influenced that of Fibonacci (Leonardo of Pisa) (c. 1170–1250), who used the ratio in related geo problems, though never connected it to the series of numbers named after him.

Golden Ratio. The golden ratio, also known as the divine proportion, golden mean, or golden section, is a number often encountered when taking the ratios of distances in simple geometric figures such as the pentagon, pentagram, decagon and dodecahedron. It is denoted ϕ , sometimes τ . The designations "phi" (for the golden ratio conjugate) and "Phi" (for the larger quantity) are sometimes also used.
