PSI (or Pounds per Square Inch) is how much pressure of air a compressor exhausts, whereas CFM tells you the volume of air produced. PSI isn't as important as CFM because most applications don't require high CFM. Any typical air compressor puts out at least 120 PSI, which is sufficient to run any nail gun, grinder or blow gun.

The spare 40+ Amp gas generator was purchased just before the trip. Both the single-phase and the three-phase hydraulic motors are new this year, as is the compressor. The HVAC air handler has a brand new VFD (Variable Frequency Drive) unit; the condenser pressures were checked, and the system is under warranty until April 2024.
